Lightsup Network Solution Partners with Nexusguard, Launches Abatis DDoS Security, Malaysia's First Local ISP-Neutral Service

A next-generation service provider, LNS (LightsUp Network Solution Sdn Bhd) is now Malaysia's first Neutral Network Carrier capable of integrating different ISP upstreams to better serve customers and their diverse needs. Starting today, LNS offers DDoS security solutions in partnership with Nexusguard, the global leader in internet security and DDoS Mitigation.

"Hacktivism is becoming more popular in Malaysia," explains **Mr. C. L .Dang, Director of LNS**, "It is no longer only large organizations that require DDoS protection, DDoS attacks are now disrupting SME companies in all industries."

According to media reports, Malaysia Airlines was hacked and defaced by Lizard Squad[2], a group notoriously known for its DDoS-for-hire[3] services. This resulted in the leak of VIP itineraries. Most small and medium enterprises lack monitoring tools that detect DDoS attacks, and unknowingly become victims of DDoS.

"Lack of adequate network security and intelligence is common at most organizations", **Mr. C.L. Dang** said, "Abatis DDoS Security provides different packages to suit all business level owners. It is a technology designed to serve the community in Malaysia - small, medium and large business owners primarily in online business and transactions, government organizations and financial institutions." LNS's collaboration with Nexusguard has created a cyber-security solution that protects against loss caused by DDoS attacks. In addition to advanced DDoS protection, load balancing and SSL Attack Handling, a Web Application Firewall (WAF) protects against website hacking while Web Acceleration improves a website's access speed. Abatis DDoS Security is a cloud based service that provides 24/7 customer service support and a customer portal that can accessed anytime, anywhere.

"Nexusguard is at the forefront of the fight against malicious internet attacks, protecting organization from threats to their websites, services and reputations" says **Mr. Bryan Sat, Nexusguard's Regional Channel Manager**. "We have the tools and expertise to protect organizations' vital business systems. Our global presence includes Malaysia among other countries in Asia, empowering us to protect Malaysian businesses against both foreign and domestic threats."

Mr. Bryan Sat concludes, "The partnership with LNS extends our end-to-end cyber security solution to enterprises in Malaysia. Often, enterprises are unaware they are under attack until damage has been done, particularly to the company's revenue and brand image. Having a protection solution in place is in today's cyber world."
